

TiviMate Quick Setup & Optimal Settings Checklist

1. Prepare Your Device

- For FireStick: Enable “Apps from Unknown Sources” in Settings > My Fire TV > Developer Options.
- For Android TV: Ready to install directly from Google Play Store.

2. Download TiviMate

- On FireStick: Install “Downloader” app, enter the official TiviMate APK URL:
<https://www.tivimate.com/apk/latest>
- On Android TV: Search for “TiviMate IPTV Player” in the Play Store and install.

3. Add Your Playlist

- Open TiviMate.
- Choose “Add Playlist”.
- Enter your M3U URL, Xstream Codes, or Stalker Portal credentials.

4. Optimize Your Settings

- Set up the EPG: Go to Settings > EPG > Add source (if needed).
- Organize channels into groups for easier browsing.
- Set up parental controls if required.

5. Upgrade to Premium (Recommended)

- Install the TiviMate Companion app on your Android phone.
- Log in and purchase the Premium license.

- Activate Premium features in TiviMate.

6. Use a VPN

- Install a reliable VPN on your device.
- Connect before streaming for privacy and security.

7. Troubleshooting

- EPG not working? Clear and reload EPG data in settings.
- Buffering? Check your connection and VPN, lower stream quality if needed.
